

Numerify

Business Analytics
for Intelligent IT

The System of Intelligence for IT™

Modern IT organizations have deployed numerous operational systems to streamline their sophisticated enterprise of people, processes, and projects. Unfortunately, the resulting sets of rich data end up trapped in fragmented systems of record. This lack of full visibility into operations impedes IT organizations from delivering rapid innovation and a consumer-grade experience while controlling costs and risks.

Numerify's suite of cloud-based analytical applications unshackles this data and delivers a comprehensive system of intelligence for IT. Leaders can leverage Numerify to obtain critical insights and build a data-driven IT™ organization that makes decisions based on hard evidence.

Don't Settle for Static Reports!

Operational applications often include reports that address the here-and-now questions such as “how many incidents are currently open?” But you need to know the “why” behind the “what” to conduct more meaningful analyses. These answers often require deep analytics such as machine learning algorithms or cross-source correlations from systems like project management, software development, and finance.

Only a sophisticated analytical platform powered by a data warehouse and in-memory data stores can deliver such capabilities. With Numerify's advanced analytical applications, IT managers gain the ability to answer new questions as they arise.

Analytics for the Plan-Build-Run Landscape

Numerify's built-for-IT suite of analytical applications give IT leaders full visibility and intelligence into their Plan-Build-Run operations. Each application offers hundreds of pre-built metrics, reports, and role-based dashboards. Our cloud-based application frees your developers from setting up KPIs and metrics or data extraction routines, saving you significant time, effort, and valuable IT resources.

Plan

Project and Portfolio Analytics provide a comprehensive view of your planning and project activities, from the portfolio level down to individual time cards. Deliver projects on time and on budget with multiple views of project costs, progress, activities, and resource usage. Leverage data from typical project management and development systems as well as agile applications to fully understand project performance, evaluate resource allocation, and track project financials.

Build

Gain immediate visibility into SDLC processes with Software Development Analytics, which leverage critical data trapped in your development and testing tools. Understand how your Build and Run processes impact release velocity to make optimal decisions that accelerate innovation and enable a continuous delivery system. Understand the full impact of application quality issues on production by analyzing your SDLC and operational data together in one place.

Run

Tackle ITIL processes spanning incidents, requests, outages, changes, and beyond with IT Service Analytics. Analyze challenges pertaining to incident demand, service request health, configuration items, service level integrity, and change failures and compliance. Use IT Asset Analytics to extract in-depth data from your CMDB, asset management system, and other relevant systems for comprehensive insight into your IT technology infrastructure.

Unique Capabilities Enable Deep Insights

Best-in-class IT business models

Metrics and models built on industry standards such as ITIL, PMI, and DevOps methodology

Full-spectrum analytics

Access pre-built dashboards, self-service visual analytics, and predictive analytics

Comprehensive data coverage

Integrate service, asset, project, financial, and HR systems as well as APM and machine log data

Personalized playbook

Customizable and extensible to reflect your organization, your processes, and your priorities

The Benefits of a Powerful Platform

Cloud-based Data Warehouse

Fast time to value with a cloud-based data store, optimized for real-time queries without impacting operational tool performance.

Incorporate External Data

Load additional data from HR, Financials, and Call Center to get a 360° view of your IT operations and business.

Advanced Analytics

A true data warehouse stores historical data for time-series analysis combined with statistical functions and text analytics.

Secure Storage

Our data store is managed with SOC II compliant operations to ensure security. Role-based access limits who can view reports.
