IT Asset Analytics

With assets responsible for as much as 40 percent of an organization's IT budget, effective oversight is crucial for today's sophisticated IT enterprises. Yet often this data remains distributed across configuration management databases (CMDB), IT service management systems, and financial systems. Numerify's cloud-based analytical application unites this data to provide greater insight into the state of assets and enable IT asset managers to improve asset performance and effectiveness.

Don't Settle for Static Reports!

Operational applications often include reports that address the here-and-now questions such as “how many virtual machine images did we provision this week?” But you need to know the “why” behind the “what” to conduct more meaningful analyses. These answers often require deep analytics such as machine learning algorithms or cross-source correlations from systems like project management, software development, and finance.

Only a sophisticated analytical platform powered by a data warehouse and in-memory data stores can deliver such capabilities. With Numerify’s advanced analytical applications, IT managers gain the ability to answer new questions as they arise such as “what is the financial impact if we push the PC refresh cycle by six months?”

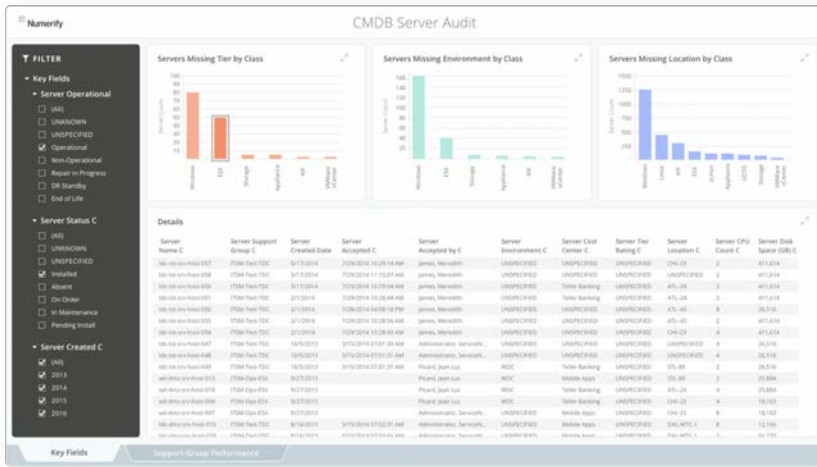

IT Asset Analytics from Numerify

Numerify’s IT Asset Analytics application provides full visibility into asset inventory, demand, and lifecycles. In-depth analyses enable IT teams to better manage inventory, streamline delivery, and optimize asset costs. With a unified view of asset management, financial, and CMDB data, IT managers are better equipped to effectively oversee asset needs and minimize the risk of unplanned downtime.

Asset Tracking and Inventory

Dive into consolidated asset data to identify and remove risks around outdated assets. Associate asset data with key processes such as incident, problem, and change management to quickly discover the root cause of service disruptions. Use predefined metrics, models, and calculations to track asset request trends while minimizing unplanned costs and downtime.

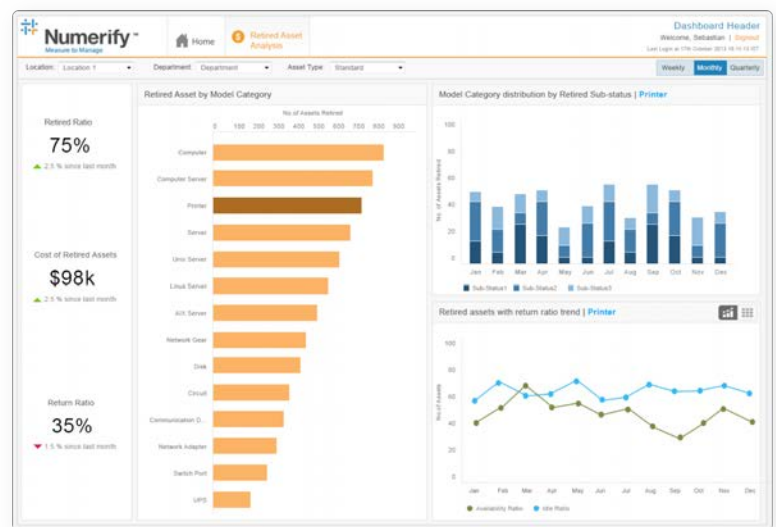

Configuration Integrity

Numerify enables asset managers to audit asset data and ensure data consistency and quality. Detect missing CMDB entries and find data discrepancies such as missing fields, duplication, and inconsistency. Filter across all dimensions of your CMDB data to understand trends over time, ensure the continuous health of data, and support your ongoing discovery process.

Asset Lifecycle Management

Obtain a complete view of asset costs to understand the total cost of ownership and make more informed purchasing decisions. Extract data from your IT system of record to identify expired contracts for expensive month-to-month leases. Locate trends in lease data by location, model, and owner, and pinpoint where information is inaccurate or incomplete.

Unique Capabilities Enable Deep Insights

Best-in-class IT business models

Metrics and models built on industry standards such as ITIL, PMI, and DevOps methodology

Full-spectrum analytics

Access pre-built dashboards, self-service visual analytics, and predictive analytics

Comprehensive data coverage

Integrate service, asset, project, financial, and HR systems as well as APM and machine log data

Personalized playbook

Customizable and extensible to reflect your organization, your processes, and your priorities

The Benefits of a Powerful Platform

Cloud-based Data Warehouse

Fast time to value with a cloud-based data store, optimized for real-time queries without impacting operational tool performance.

Incorporate External Data

Load additional data from HR, Financials, and Call Center to get a 360° view of your IT operations and business.

Advanced Analytics

A true data warehouse stores historical data for time-series analysis combined with statistical functions and text analytics.

Secure Storage

Our data store is managed with SOC II compliant operations to ensure security. Role-based access limits who can view reports.
